What is Ovid?

1

Ovid is a search platform that enables you to search a variety of medical databases

Databases that you can search with Ovid:

MEDLINE

The largest medical database. Produced by the US National Library of medicine it contains millions of citations from thousands of **biomedical** and **life science journals**. It covers allied health specialties, dentistry, nursing, medicine, pre-clinical sciences

Embase

The Excerpta Medica database (**Embase**), is a major biomedical and pharmaceutical database indexing over 3,500 international journals in the following fields. Although it has a large cross over with MEDLINE, Embase is more European and pharmacology focussed

Emcare

The **Emcare** database is a database encompassing nursing and allied health topics. It has nearly 5 million records dating back to 1995 and includes a comprehensive scope of international content

HMIC

The **Health Management Information Consortium** database is a compilation of data from the database of the Department of Health's Library and Information and from the King's Fund. It includes, articles, books, pamphlets, government reports, and a wide range of grey literature on health service policy, management and administration, with an emphasis on the British National Health Service

Social Policy & Practice

Social Policy and Practice represents an important source of evidence-based social science research for policy-makers, practitioners, educators and students working within economic and social development, social administration, social services, and care management

Accessing Ovid

Go to the **Library website**

library.merseywestlancs.nhs.uk

Click on **Resources**

Followed by **Databases**

Select the **database** to wish to access

Choose from:

- Medline
- Embase
- Emcare
- HMIC
- Social Policy & Practice

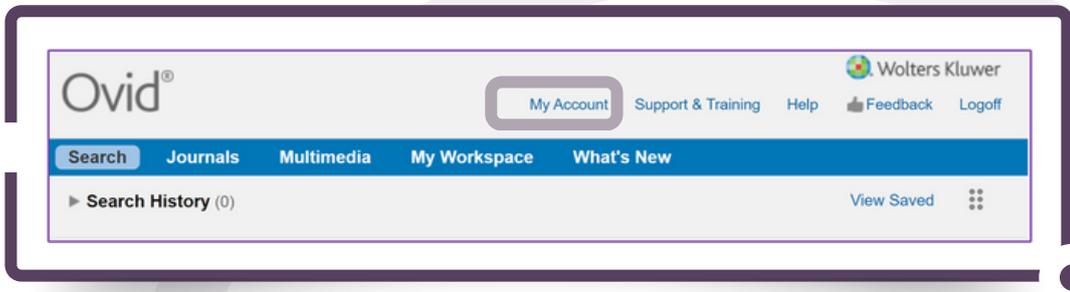

You will be prompted to sign in using your **NHS Athens account**. If you don't have an account, you can register here openathens.nice.org.uk

Creating a Personal Ovid Account

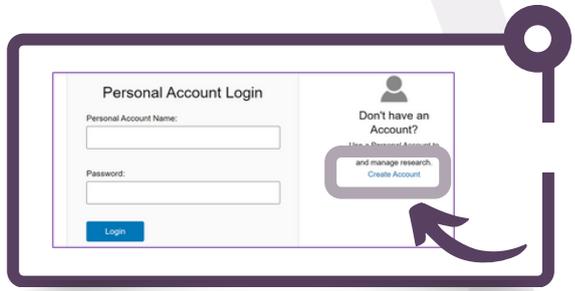

You will need your own Ovid account in order to be able to save your search and your search results.

To create your Ovid account, click on **My Account** on the top right of the Ovid search page

And then select **Create Account** on the right of the screen

If you already have an Ovid account you can log in at the page, entering your account name and password in the relevant boxes and then click on **Login**

Questions and Concepts

It is important that you have a **clear idea of your question** before you start to search – what you get out of a database search is only as good as the question you put in.

The first thing to do is to identify the **key concepts or keywords** within your research question

Pick out your **main concepts**

What are the most **important** aspects of your search?

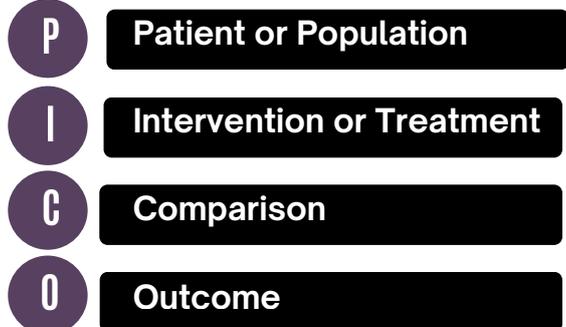

This will ensure you do not miss out on any important information or research. These keywords will become the **basis** of your search strategy

It may be helpful to frame your research topic as a **question**, with a question mark at the end

PICO is a framework that can help with this.

PICO is a format for developing a good clinical research question prior to starting your research

It is a mnemonic used to describe the **four elements of a sound clinical question**

Example: **In patients with osteoarthritis of the knee is hydrotherapy more effective than traditional physiotherapy in relieving pain?**

P Patient or Population

I Intervention or Treatment

C Comparison

O Outcome

Osteoarthritis and knee

Hydrotherapy

Physiotherapy

Pain relief

If PICO does not work for your question, other frameworks are available. Find some more here:

<https://information-specialists.leeds.ac.uk/information-specialists/search-concept-tools/>

Once you have thought of your **question** and **search terms**, consider what **synonyms** and **alternative spellings** or **brand names** there might be for your terms. You will need to search for these too.

Example: aspirin, acetylsalicylic acid, ASA.

Opening the Search History

Before you start your search, click on **Search History** to open it

Ovid MEDLINE(R) 1946 to March Week 1 2022

Enter keyword or phrase (* or \$ for truncation)

Keyword Author Title Journal

Search Expand Term

Limits (expand) Include Multimedia Map Term to Subject Heading

Carrying out a Thesaurus Search

A **thesaurus** is a list of terms (known as subject headings) that are used to label articles in a database. When you search using the thesaurus you will find **all the articles on the same topic no matter what text words you use**.

For example:

There are many possible phrases that could be used to search for articles on heart attacks, but the MEDLINE subject heading for this condition is **myocardial infarction**. If you were to carry out a thesaurus search on MEDLINE for this subject heading you would find all the articles on this subject regardless of whether they contain the phrase myocardial infarction, heart attack or cardiac arrest etc.

Check that **map term to subject heading** is selected

The screenshot shows the Ovid MEDLINE search interface. At the top, there are navigation links: Basic Search | Find Citation | Search Tools | Search Fields | **Advanced Search** | Multi-Field Search. Below this, it indicates '1 Resource selected | Hide | Change' and 'Ovid MEDLINE(R) 1946 to March Week 1 2022'. The search input area has radio buttons for 'Keyword' (selected), 'Author', 'Title', and 'Journal'. The search box is empty. Below the search box, there are options: 'Limits (expand)', 'Include Multimedia' (unchecked), and 'Map Term to Subject Heading' (checked). A purple arrow points to the 'Map Term to Subject Heading' checkbox.

To carry out a thesaurus search, first type your term into the search box and then click on **Search**

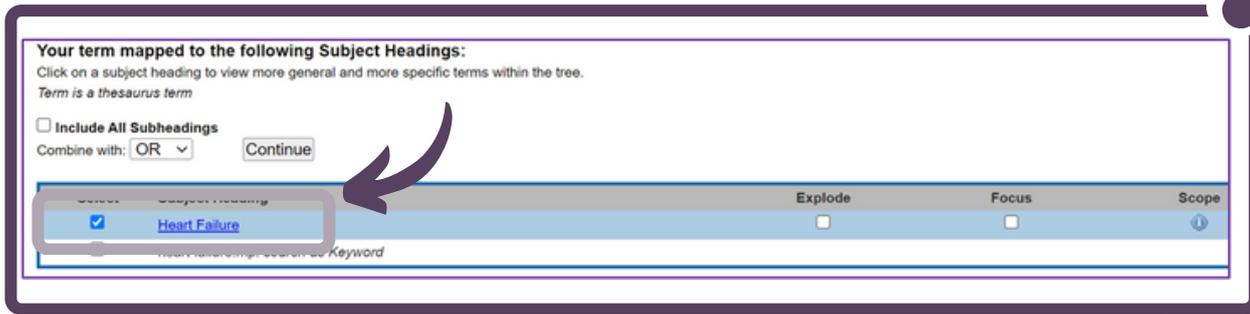

The screenshot shows the Ovid MEDLINE search interface with the search term 'heart failure' entered in the search box. The 'Search' button is highlighted with a purple arrow. The 'Map Term to Subject Heading' checkbox remains checked.

You will then be shown a list of headings that most closely match your search term.

Sometimes this list can be quite long, other times there might only be one term that matches your search. If there is no close match there will be no headings listed – try to think of another term for your subject and try again.

If you cannot find a relevant thesaurus term – carry out a **text word search** instead

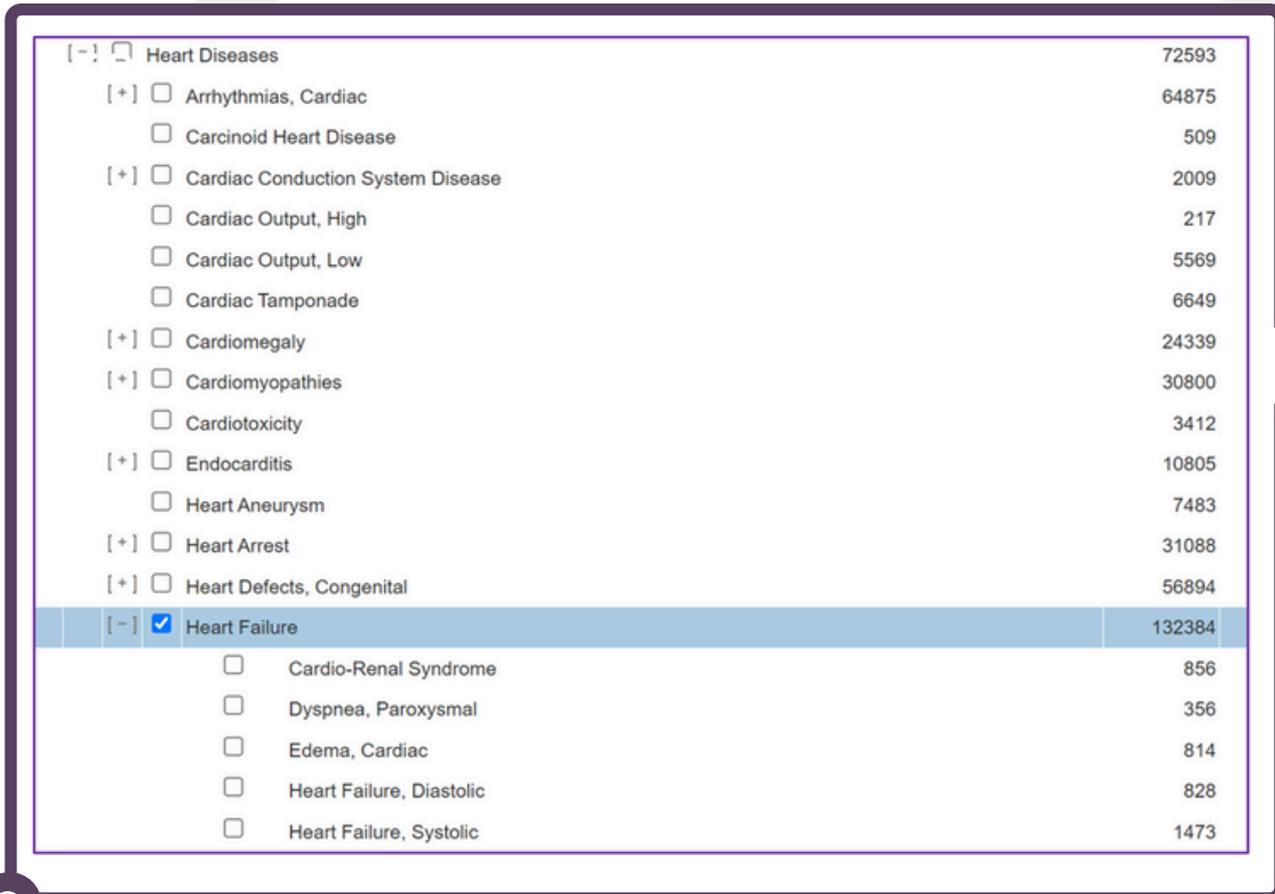

Click on the heading that most closely matches the subject you are searching

Your term mapped to the following Subject Headings:
Click on a subject heading to view more general and more specific terms within the tree.
Term is a thesaurus term

Include All Subheadings
Combine with:

	Explose	Focus	Scope
<input checked="" type="checkbox"/> Heart Failure	<input type="checkbox"/>	<input type="checkbox"/>	

[-] <input type="checkbox"/> Heart Diseases	72593
[+] <input type="checkbox"/> Arrhythmias, Cardiac	64875
<input type="checkbox"/> Carcinoid Heart Disease	509
[+] <input type="checkbox"/> Cardiac Conduction System Disease	2009
<input type="checkbox"/> Cardiac Output, High	217
<input type="checkbox"/> Cardiac Output, Low	5569
<input type="checkbox"/> Cardiac Tamponade	6649
[+] <input type="checkbox"/> Cardiomegaly	24339
[+] <input type="checkbox"/> Cardiomyopathies	30800
<input type="checkbox"/> Cardiotoxicity	3412
[+] <input type="checkbox"/> Endocarditis	10805
<input type="checkbox"/> Heart Aneurysm	7483
[+] <input type="checkbox"/> Heart Arrest	31088
[+] <input type="checkbox"/> Heart Defects, Congenital	56894
[-] <input checked="" type="checkbox"/> Heart Failure	132384
<input type="checkbox"/> Cardio-Renal Syndrome	856
<input type="checkbox"/> Dyspnea, Paroxysmal	356
<input type="checkbox"/> Edema, Cardiac	814
<input type="checkbox"/> Heart Failure, Diastolic	828
<input type="checkbox"/> Heart Failure, Systolic	1473

You will then be taken to a page that shows more detail about the thesaurus term you selected.

For example, on the page below we can see the hierarchy of the various related thesaurus headings. Heart disease is the **broader term**, that we could select if we wanted to also include articles that covered heart disease more generally. We can also see **narrower terms** which we can select to look at more specific types of heart failure

You can see **how many results** you will get by searching each term and if you are not sure if a thesaurus heading is the correct one, you can find out more by clicking on the  symbol to see the scope notes

Explode allows you to expand your search to include additional, more specific terms

Focus will limit your search to only those articles in which the thesaurus term is the main subject of the article

Subject Heading	Hits	Explode	Focus	Scope Note
<input checked="" type="checkbox"/> Heart Failure	132384	<input checked="" type="checkbox"/>	<input type="checkbox"/>	i
<input type="checkbox"/> Cardio-Renal Syndrome	856	<input type="checkbox"/>	<input type="checkbox"/>	i
<input type="checkbox"/> Dyspnea, Paroxysmal	356	<input type="checkbox"/>	<input type="checkbox"/>	i
<input type="checkbox"/> Edema, Cardiac	814	<input type="checkbox"/>	<input type="checkbox"/>	i
<input type="checkbox"/> Heart Failure, Diastolic	828	<input type="checkbox"/>	<input type="checkbox"/>	i

For example:

Selecting **explode** for the thesaurus heading Heart Failure will find all 132384 articles about heart failure in general, as well as all the articles under the headings Cardio-Renal Syndrome; Dyspnea, Paroxysmal; Edema, Cardiac; Heart Failure, Distolic; Heart Failure, Systolic

Note that you can use the Focus and Explode options **at the same time**

Once you are happy with the various options that you have selected, click on **Continue**

Tree for Heart Failure Database: Ovid MED

Combine with: OR

Scroll down for highlighted search term.

Select Term(s)	Subject Heading	Hits	Explode	Focus	Scope
[+] <input type="checkbox"/> Anatomy (Non MeSH)		0	<input type="checkbox"/>	<input type="checkbox"/>	i

Subheadings

You will now be given the option to restrict your search to **specific subheadings**. You can choose one or more sub heading at a time. Select the subheadings you want by clicking in the box to the left of the heading. If you don't want to restrict your search in this way you do not need to select any

Once you have selected the headings you require, click on **Continue**

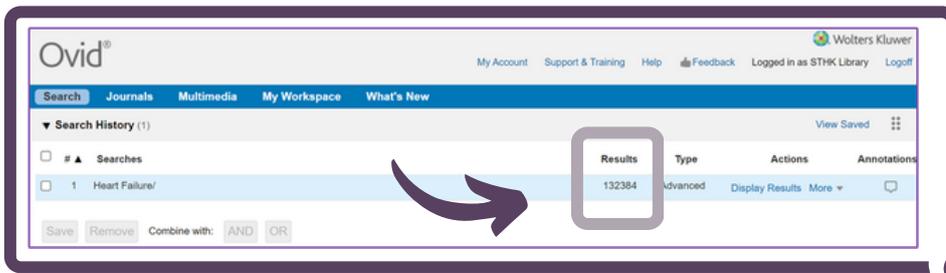

Subheadings for: Heart Failure

Combine with: OR

Include All Subheadings (132384)
 -- or choose one or more of these subheadings --

<input type="checkbox"/> /bl - Blood (9101)	<input type="checkbox"/> /lj - Legislation & Jurisprudence (1)
<input type="checkbox"/> /cf - Cerebrospinal Fluid (4)	<input type="checkbox"/> /me - Metabolism (9114)
<input type="checkbox"/> /ci - Chemically Induced (2537)	<input type="checkbox"/> /mi - Microbiology (123)
<input type="checkbox"/> /ch - Chemistry (3)	<input type="checkbox"/> /mo - Mortality (14223)
<input type="checkbox"/> /cl - Classification (824)	<input type="checkbox"/> /nu - Nursing (1329)
<input type="checkbox"/> /co - Complications (15989)	<input type="checkbox"/> /ps - Parasitology (55)
<input type="checkbox"/> /cn - Congenital (140)	<input type="checkbox"/> /pa - Pathology (6088)

Ovid will now run your search and you can see the **number of results** in your search history

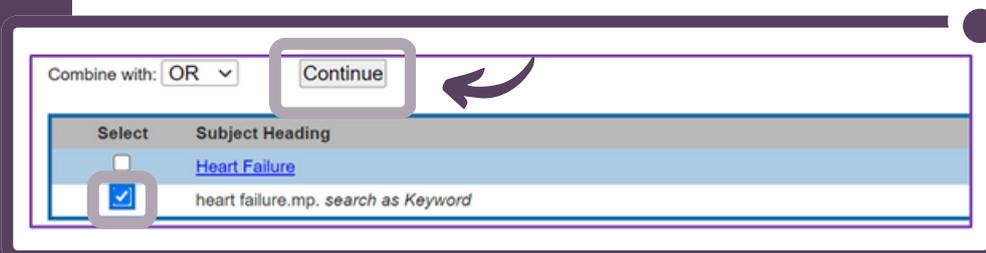

Carrying out a Text Word Search

This is also sometimes referred to as a **keyword search** or **free text search**.

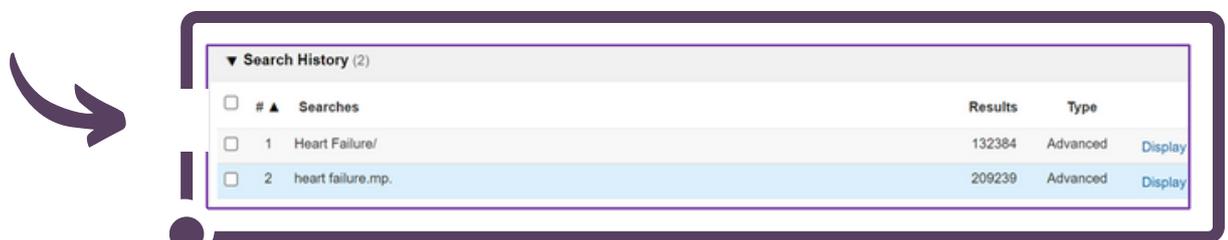

Type in the term you are looking for and Ovid will look for records that include that term. It uses the **exact** term that you type in, so it is important to consider if there are **alternate terms** you should also be searching for. Consider if your term has **alternative spellings** (anaesthetic, anesthetic) or **synonyms** (stroke, cerebrovascular accident) or **abbreviations** (attention deficit hyperactivity disorder, ADHD) or brand names (ibuprofen, neurofen).

To carry out a text word search, **type the term you are looking for** into the search box and then click **Search** as you did before for your thesaurus search

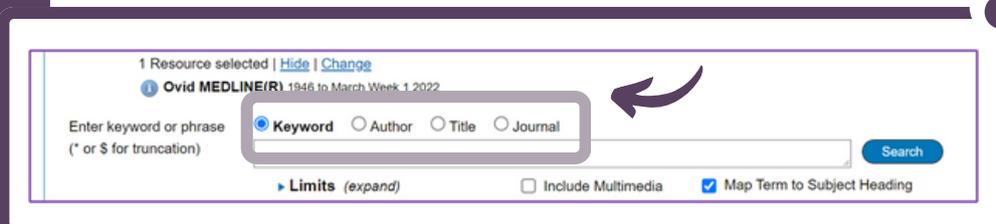

This time, select the **search as keyword** option and then click on **Continue**

Ovid will now run the search and a new search line will be added to your search history

Note that Ovid defaults to **.mp** for keyword searches. This stands for **multi purpose search** and means that Ovid will search in the **Title, Original Title, Abstract, Subject Heading, Name of Substance, and Registry Word** fields

If you would prefer to search in the **title, author** or **journal title** fields you can specify this before you search

Truncation

You can use **truncation** to help the database find various forms of a word/term.

Ovid allows you to use * or \$ for truncation

For example: entering the term **prevent\$** (with the \$ or * at the end) into the search box will retrieve results containing prevents, preventative, prevention, preventing etc

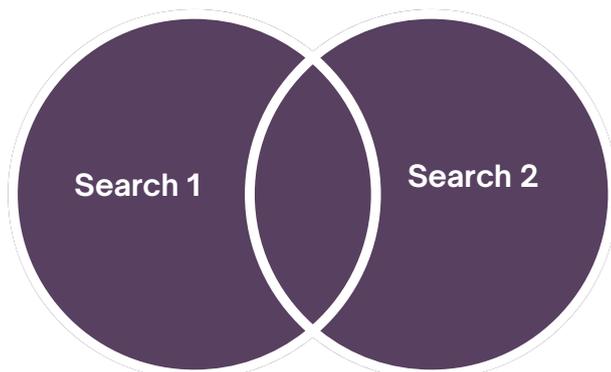

And entering the term **wom*n** will retrieve results containing both woman and women

*will work both at the end of a word and in the middle of a word. \$ can only be used at the end of a word.

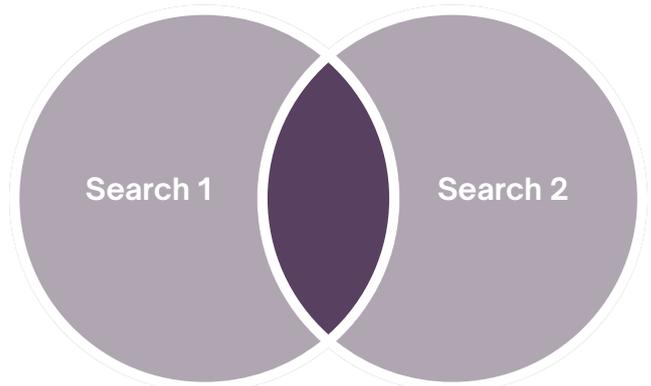

Combining Your Searches

To retrieve relevant articles you will need to **link** your various searches together. This is done by using **AND** or **OR** (known as Boolean searching)

OR searching broadens a search by looking for either

AND searching narrows a search by only looking for both terms in combination

For example. In the search below, we have searched using the thesaurus heading **anemia, sickle cell** (**Search 1**) and we carried out a keyword search for **penicillin** (**Search 2**)

We can combine them using **OR**, by **clicking in the box** next to the search lines to be combined and then selecting the **OR** option

Search History (2)		Results	Type	Actions
<input checked="" type="checkbox"/>	1 Anemia, Sickle Cell/	22701	Advanced	Display Results More ▾
<input checked="" type="checkbox"/>	2 penicillin.mp.	65941	Advanced	Display Results More ▾

Save Remove Combine with: AND OR

This gives us a new set of search results in our search history (**Search 3**), with 88,414 articles found

#	Searches	Results	Type	Actions
1	Anemia, Sickle Cell/	22701	Advanced	Display Results More
2	penicillin.mp.	65941	Advanced	Display Results More
3	1 or 2	88414	Advanced	Display Results More

If we were to combine the two searches using **AND** we get only **228** results

#	Searches	Results	Type	Actions
1	Anemia, Sickle Cell/	22701	Advanced	Display Results More
2	penicillin.mp.	65941	Advanced	Display Results More
3	1 and 2	228	Advanced	Display Results More

Note: If you can't see all your search lines displayed – click on expand.

Limits

If you are getting **too many results**, you can apply **limits** to narrow your search further. You can apply limits such as **Language, Dates** or **Age Group** to ensure the articles you retrieve are more likely to be relevant

To limit your search, select the search line that you want to apply the limit to and then click on the **limits button** underneath the search box.

Search History (7)

#	Searches	Results	Type	Actions	Annotations
4	Penicillin/	40757	Advanced	Display Results More	
5	penicillin.mp.	65941	Advanced	Display Results More	
7	3 and 6	270	Advanced	Display Results More

○ Saving your Results

Saving your Results to My Project

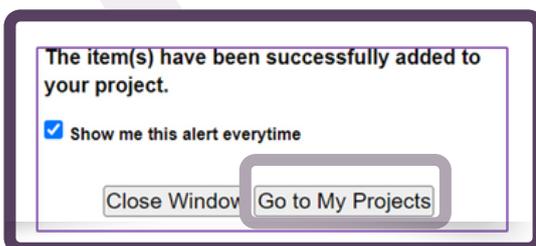

Once you have selected all the results that are of interest to you, you will want to create a Project to save them in to

- Click on **My Projects**

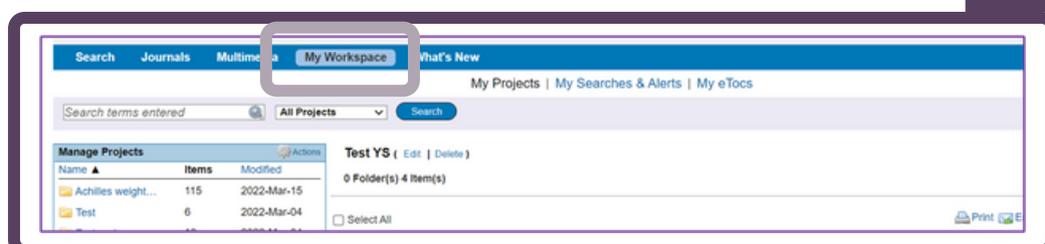

- You will then be asked if you want to add it to an **existing project** (you can choose from a dropdown list of projects you have already created) or if you want to **create a new project**
- Create a **name** for your project and you can also add a description if you wish
- Click on **Add Items** to add your selected results to your project
- You can now either return to your search by selecting **Close Window** or you can select **Go to My Projects** to look at your saved results and export them

The dialog box is titled 'Add Item(s) to:'. It has two radio buttons: 'An Existing Project' (selected) and 'A New Project'. Below the radio buttons is a dropdown menu showing 'Achilles weightbearing'. There are two text input fields: 'Project Name *' and 'Project Description'. At the bottom right, there are two buttons: 'Cancel' and 'Add Item(s)', with the latter highlighted by a red box.

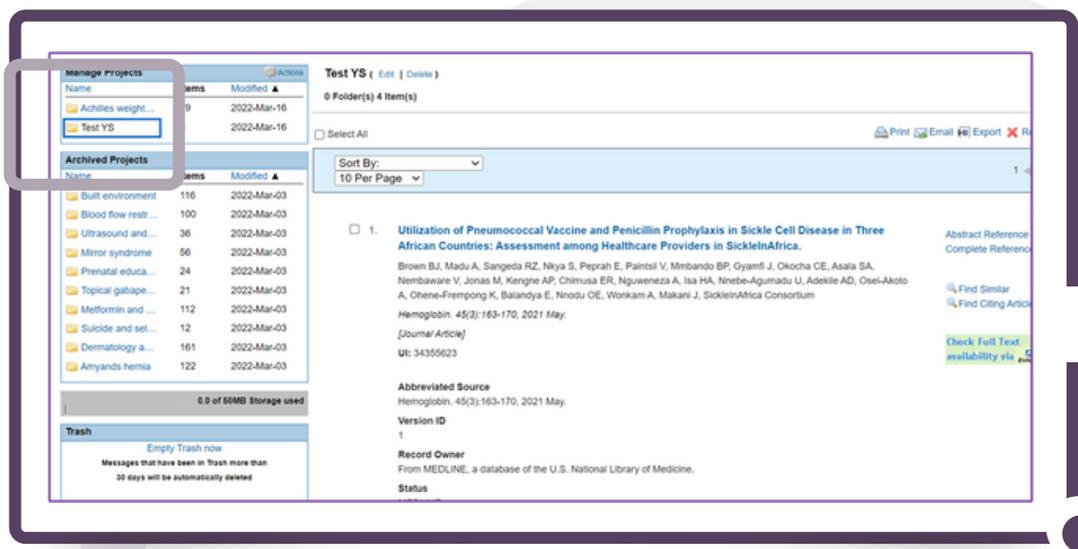

Exporting Your Results

If you select **Go to My Projects** you will be taken straight to your **My Project Page**. If you want to access your 'My Projects' page at a later time, you will need to select **My Workspace** at the top of your screen

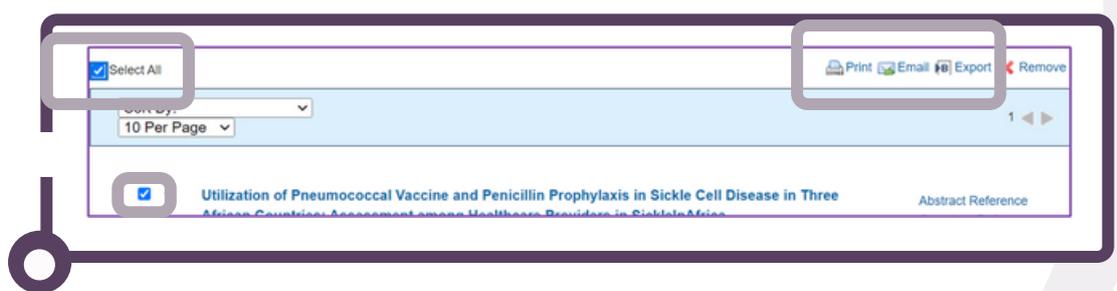

Select the project you wish to use from the **My Projects Menu** on the left of the screen and then select the items you want to export.

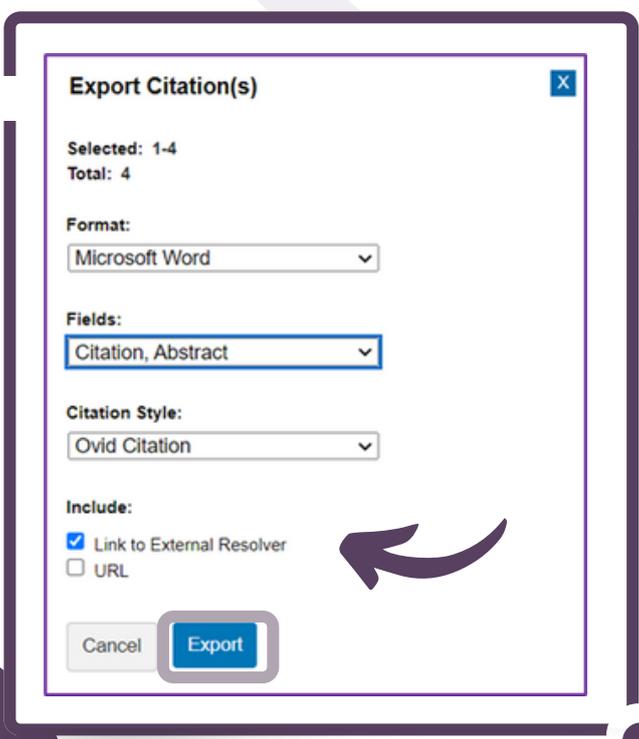

You can choose **Select All** if you want to export all the results in that project

And then you can choose to **print**, email or **export** your results

When exporting you can choose which file format you want to export in (word, pdf, RIS and many others) and you can also select what fields you would like to include and what citation style you prefer. When you have made your choices, click on **Export** and your file will be created

We also recommend that you untick the URL option and include only the option to export as **Link to External Resolver**

Alerts

When saving your search history you are given the option to save it as an **Auto Alert (SDI)**

Save Your Search or Create an Alert

Search name: Enter an easy to find title for this search

Comment: Add a description, you can change it later. Optional

Type: AutoAlert (SDI)

Buttons: Cancel, Save

If you choose this option, you will then be able to set up an **Alert**. You can set up a schedule for the alert, deciding **how often** you want it to run, **how you would like the alert to be delivered**, and specify the **email address** you want the alert to be sent to (if you want to receive the alert via email)
